

MINI CANTILEVER RACKING

Ideal for long, irregular and mixed loads

Our Mini Cantilever system is designed for hand or machine loading storage of medium loads to maximize your storage space while giving you easy access to your products. The Cantilever racking system is ideal for storing long, irregular and mixed loads.

The Mini Cantilever racking system for the storage of long goods. For loads varying from 50 to 500 kg per cantilever arm and for most types of long goods an optimised storage solution can be provided.

Typical long goods are metal and plastic tubes, wooden boards, hot rolled steel profiles. The Construction of our Cantilever racking is made of hot rolled steel profiles. The standard finish is a high quality epoxy polyester powder coating for inside applications.

Technical Spec Mini Cantilever Racking

- The tower and base are bolted together.
- Single and Double sided system.
- Column heights are 2m, perforated every 75mm. Rated to 3000kg.
- The Cantilever racking is suitable for forklift or hand loading.
- Arm length of our Mini Cantilever racking is 600mm - Rated to 500kg per Arm.
- Arms are bolted to Tower and adjustable every 75mm, dependent on goods being stored.
- Optional tubes drop into top of Arms for product separation.
- Being that the cantilever racking system is modular in nature, additional arms, uprights and bases may be added as the storage requirements change.
